ABSTRACT: In order to remedy the objection in the original abstract and to define it more particular, please amend the abstract as following:

Provided is an apparatus for cleaning eyeglasses that includes a housing, a fluid reservoir, and an evacuation apparatus (such as a pump) for pressurized evacuation of fluid out of the fluid reservoir. A atomizer trigger coupled to the evacuation apparatus Two arms are attached to the housing at their proximal ends that can rotate and, in their nominal orientations, extend (preferably at an outward angle) from the housing. In a representative embodiment, each arm has a wiping pad at its distal end and is spring-biased into its nominal orientation, such that the wiping pads may be compressed toward each other. ~~Optionally, the fluid reservoir is substantially shape-retaining and is provided with a burstable seal.~~
